Cheyenne, WY 82001

RE: Emergency Response Facility

Dear Mr. Schingle:

Plan One / Architects along with TCA Architecture is pleased to provide the Cheyenne Fire and Rescue Department with the following Statement of Qualifications for the proposed Emergency Response Facility Project.

Our proposed team affords the City of Cheyenne the opportunity to engage the services of a nationally recognized fire station design firm, TCA Architecture, together with the enthusiasm for, and commitment to, Wyoming design Plan One/Architects delivers to its clients.

While the project will be lead by Plan One from the interview through the 11-month walk-thru, our teaming arrangement will ensure that the design experts from TCA Architecture will be front and center during the programming, planning, and schematic design phases of the project. This assures the project's stakeholders they will be actively engaged with a team who fully understands the nuances of these types of facilities while simultaneously establishing a relationship with a firm who has a truly vested interest in working with the City.

Looking to the future, we see our new Cheyenne office as a cornerstone of growth for our firm and look forward to developing strong working relationships with the City. If you have questions regarding the information contained within this Statement of Qualifications, please do not hesitate to contact me at 307.352.2954.

Sincerely,

Charles E. Van Over, AIA
President

Incorporated in 1985, Plan One/Architects has grown to one of the largest Wyoming based architectural firms in the state. Plan One/Architects employs 17 people in three offices with five Registered Architects and a LEED Accredited Professional on staff.

While many large regional Firms choose to specialize in a specific area of architecture, such as medical, correctional or educational, Plan One has chosen to specialize in providing design work that fits the needs of clients located within the State of Wyoming. By being flexible and responsive, Plan One has been able to successfully design Projects including correctional, educational, and historic preservation. This ability to adapt to whatever a Project requires gives clients in the State the distinct advantage of working with a Wyoming based firm whose reputation is at stake with each and every project it undertakes. We take all of our projects very seriously, as we know that in Wyoming reputation is the key to continued work.

Recognizing that, while Plan One has designed several successful fire stations in the past, our experience might not be as recent as others in the area, we have enlisted the services of TCA Architecture•Planning from Seattle, Washington, to ensure that the most modern fire station design principles are incorporated into the project. TCA Architecture has been involved in the planning and design of fire service facilities since 1960. With the planning and design of over 250 fire stations throughout the US to their credit, their award-winning firm understands the fire service culture, and how this influences facility design. As a result of their years of effort, TCA is recognized in the national fire community as one of the leading fire facility design firms in the country.

Rounding out our consultant team will be Cator, Ruma & Associates, providing mechanical, electrical, and Information Technology engineering services; Martin/Martin Wyoming for structural engineering; Western Research and Development for civil engineering; and J.R. Conkey & Associates of Roseville, California for professional cost estimating.

Due to the specialized nature of TCA's design experience this would be our first time working with their firm, however, we understand what to expect in this kind of an arrangement due to our successful collaborations with other nationally recognized firms in the fields of criminal justice and medical facilities planning. With that exception, Plan One/Architects has teamed successfully with each of the other consultants listed below on past projects and can attest to their professional abilities from first-hand experience.

The proposed organizational chart below identifies the primary point of contact from each firm associated with this project. Detailed resumes for all identified key personnel for this project can be found in Section 9 of this proposal.

Proposed Organizational Chart

Per the information requested in the RFP, the following table represents our estimated division of work on the project from Programming through the 11 month walk-thru. Plan One/Architects will be responsible for the remaining value of work through the entire project.

Project Name: " RFP-6-16 EMERGENCY RESPONSE FACILITY PROJECT"

ATTACHMENT "B-3"

USE OF SUBCONSULTANTS

Sub-Consultant Name/City/State	% of Value of Work	Work Tasks to be Assigned
TCA Architecture Seattle, Washington	30%	Integral from Programming through Schematic Design; involvement decreases to peer review/oversight from Design Development through Construction.
Cator, Ruma & Associates Cheyenne, Wyoming	7.5%	Mechanical and Electrical Engineering IT Design
Martin/Martin Wyoming Cheyenne, Wyoming	1.7%	Structural Engineering
Western Research & Dvlp. Cheyenne, Wyoming	17%	Civil Engineering - based on comprehensive scope of work.
J.R. Conkey & Associates Rosevill, CA	.05%	Professional Cost Estimating
Total Value Subcontracts	56.7%	

Based on the project award schedule outlined in the RFP, we have beginning work on this project the first week on January, 2016, with the 100% review of Design Development Documents complete by March 16, 2016. At that point in the process the City will weigh in with its final approval to take the project through Construction Documents, and will have had the opportunity to review three professional cost estimates, one each at the Conceptual, Schematic, and Design Development phases of the project. Once the City approves the 100% Design Development documents, we will continue to work towards 100% of Construction Documents, having those complete, ready for Bid, when approved by voters.

Proposed Phase I Schedule

	2016																				
Task	1/4/2016	1/11/2016	1/18/2016	1/25/2016	2/1/2016	2/8/2016	2/15/2016	2/22/2016	2/29/2016	3/7/2016	3/14/2016	3/21/2016	3/28/2016	4/4/2016	4/11/2016	4/18/2016	4/25/2016	5/2/2016	5/9/2016	5/16/2016	5/23/2016
Scoping Meeting	█																				
Program Planning		█	█	█																	
Conceptual Estimate				█																	
Schematic Design				█	█	█															
SD Estimate						█															
Design Development							█	█	█	█											
65% Review Meeting											█										
DD Estimate											█										
Construction Documents											█	█	█	█	█	█	█	█	█	█	█
95% Review Meeting																█					
Final Design Meeting																		█			
Final Estimate																	█				
Phase 1 Substantially Complete																			█		
Phase 1 Complete																				█	

Phase II will be dependent on the successful outcome of the 1% sales tax initiative. Given that, we show Phase II of the project gearing back up in December, 2016, with the project attaining Substantial Completion in November of 2017.

Proposed Plan One/Architects' Schedule 2017

Task	December	January	February	March	April	May	June	July	August	September	October	November	December
Begin Phase 2													
Phase 2 Substantially Complete													
Phase 2 Final Completion													

As projects are fluid entities we will do our best to outline the key designer's approximate time commitments, relative to their other projects, to the Emergency Response Facility Project through the various stages of design and construction:

	Programming	Schematic Design	Design Development	Construction Documents	Bidding Negotiations	Construction Administration
Plan One/Architects						
Charlie Van Over	25%	15%	20%	25%	20%	20%
Britt Swanson	25%	15%	35%	50%	25%	30%
Ken Burnett	5%	5%	5%	5%	10%	25%
TCA Architecture						
Brian Harris	60%	70%	15%	5%	5%	5%

While the ultimate goal of this project is to provide the City of Cheyenne with up to three new Emergency Response Facilities, the key to successfully achieving this will be how effectively the design team can utilize the potential sites available to the City.

From just our brief conversations with the attendees at the pre -proposal conference, it is evident that there are several concerns associated with the Dell Range site. Most notably, the site is long and narrow and land-locked on all four sides by the Sam's shopping center on the west, Wal- Mart on the north and east and Del Range Blvd. to the south. While the firemen can control the traffic light in front of the station from their trucks to stop all traffic on what is reportedly the busiest roadway in Wyoming, the positioning of the one story fire house on the southern portion of the site adds additional challenges for the firemen when they return their fire equipment to the station. Access to the fire house by fire equipment is made from Del Range on a dirt road that is located along the west property line. Fire equipment travels along this dirt road to the north of the site where they can re-position their vehicle and enter the fire station equipment bays from the north. Additionally we understand that the location of utility boxes close to the station access routes have a tendency to test the driver's ability to maneuver the big rigs into the site.

Fortunately for the City of Cheyenne, **Brian Harris of TCA wrote the book, or at least part of the book, on fire station site location and selection.** While the solution for the Dell Range facility will require a new site plan to correct some of the issues we have been made aware of, Brian's expertise in site evaluation will be invaluable to the assessment of the other two sites. As noted in his contribution to SITE LOCATION AND SELECTION (co-authored by Eric Schaer & Forest Hooker) from the International Association of Fire Chief's Fire Station: Architectural Insight to Planning Design and Construction, questions that should be addressed during such an assessment include:

Is space needed for training structures and drills?

Maximum crew parking required –what's required at a shift change?

Is parking required for visiting apparatus?

What is the nature of service area: urban, suburban, rural?

The largest turning radius of apparatus to be used now or in the future will affect paving layout.

On-site utilities, fueling stations, back-up generators.

Covered carports

Storm water retention or detentions requirements –e.g. ponds or vaults

Test-to-fits of building and site needs determine minimum and maximum square footage needs of a site as well as site access requirements –i.e. can a site be accessed from a single point or will multiple vehicle access points produce a more efficient use of site square footage. When looking at site needs, it is important to prioritize the requirements and to distinguish between must-haves and nice-to-haves. For instance, if a drive-through apparatus bay is a must-have the minimum site size will be much larger than if it fell into the nice-to-have column. Well defined and prioritized site needs provide a useful foundation for site evaluation.

scope of work

While it would be easy to say that Plan One/Architects and TCA Architecture are committed to the scope of work outlined in the proposal and leave it at that; the statement would really fall short of our actual commitment to the project. The Plan One • TCA team is committed to provide the City of Cheyenne with a facility that melds their vision of the facility with the most current fire station design philosophies and principles ; meets the need for replication at other sites; provides durable, firefighter friendly finishes; and is cognizant of budget. We are committed to being an active participant in the site assessment process, and perhaps most importantly, the promotion of this project through the 1% tax initiative that will provide funding for construction. Having designed project in Wyoming for 30 years, Plan One truly understands that grass roots support for these types of projects is key and is often the difference with this type of “make or break” funding situation. Our ability to provide photo realistic representations of the proposed facilities, plus our commitment to attend town hall meetings to explain the philosophies involved in the programming and planning process will be aimed at garnering support for the project.

While the nature of the facilities do add a degree of specialized programming to the project from both a functional and prototypical standpoint, the basic tenets of design for both Plan One and TCA remain the same, input from project stakeholders will make this project a success. Both firms strongly adhere to the principle that this facility needs to be designed for the City of Cheyenne and its current and future needs and, that what has worked in other stations, might not be the right solution for Cheyenne. In particular for this project we will work together with the City to address specific “fire facility issues” while developing the prototypical design requested in the RFP.

Key to the operational layout of the facilities will be the incorporation of current and developing essential facility standards, NFPA standards, trends in the fire service relative to gender neutral facilities, development of efficient paths of response and certainly making sure the facility is durable and easy to maintain. Understanding how the facilities are currently maintained will be key to increasing durability and “firefighter proofing” the facility. Another aspect of facility design which we recommend for review and consideration is the incorporation of integrated training features to allow firefighters to have manipulative training opportunities on demand within the facility itself. TCA has incorporated integrated training opportunities into many facilities at virtually no additional cost by carefully designing features such as multipurpose spaces, repelling anchors, breach props, confined space props, knot tying bars, laddering walls etc. into the structure of the facility. Designing a forward thinking facility which can accommodate not only today’s firefighters, but also the generations to come, will be vital to the process.

EASTSIDE FIRE & RESCUE PROTOTYPE FIRE STATIONS

In 2001 multiple agencies created a new fire and emergency medical services agency called, Eastside Fire & Rescue. The agencies joining in this consolidation included King County Fire District 10 and 38, and the cities of Issaquah, North Bend, and Sammamish. Over the last 15 years TCA has been the sole specialty fire facility design firm responsible for designing and remodeling facilities for all agencies. Through a shared goal of programmatic and operational consistency, reduction of the cost of ownership and maintenance, and planning for flexibility for change and resiliency over time, TCA worked closely with Eastside Fire and Rescue to develop a “kit of parts” which have been implemented in all new facilities over the last 10 years. While each facility is aesthetically unique given the circumstances of the community and site, there is a common thread of individual space sizes, adjacencies, systems and core materials being used in each facility. Lessons learned from early stations continue to inform current and future decision making. Station 72 located in Issaquah, WA (pictured top right) was the first LEED platinum NZEB ready fire station in the country. Station 87 (pictured above) is located in North Bend at the foothills of the Cascades. The recently completed Station 78 (pictured bottom right) also was based on the prototype components developed for the previous facilities.

Facility	Size	Date	Cost Est	Final Cost	Variance
FS 72	11,435 SF	2011	\$ 4.5M	\$ 4.2M	Depressed market conditions
FS 87	12,200 SF	2013	\$ 4.08M	\$ 4.09M	Unforeseen soil conditions
FS 78	9,500 SF	2014	\$ 4.2M	\$4.25M	Misc. construction revisions, water mitigation

SNOHOMISH COUNTY FIRE DISTRICT 1 PROTOTYPE FIRE STATIONS

TCA provided a needs assessment, facility evaluations of 13 existing fire stations and prototype Fire Station programming for Snohomish County Fire District 1. Work included an operational and fiscal analysis of the District based on current and projected growth, planned mergers, annexations, and sustainable staffing levels. From this analysis, target areas for fire and training facilities were identified in consideration of NFPA 1710 goals. Overlaying the existing six District stations and the additional four neighboring City facilities, additional stations were placed relative to growth patterns and response criteria. Using this information, facility recommendations were prepared and a prototype plan was established and funded. Fire Station 18 (pictured above) represents one of the new prototype stations that was developed for the District as part of the Master Planning work. A sloped residential site with narrow access point, a salmon bearing stream, environmental mitigation and tree protection all shaped the site and layout of the Station.

CITY OF SEATTLE MASTER PLANNING & PROGRAMMATIC PROTOTYPE FIRE STATIONS

TCA worked with multiple departments within the City of Seattle for over four years to develop a \$167 million emergency response levy supported by our Long Range Facilities Plan and Operational Program Manual. Key programmatic criteria and facility standards were developed to achieve operational consistency. Core values included: standardizing the results, respecting neighborhood diversity, maintaining culture and tradition, and the overarching theme of “Any Rig, Anywhere, Anytime.” The levy funded the renovation and replacement of 34 neighborhood facilities, new fire boats, a new fire training facility, and a new command facility which included a Headquarters, Emergency Operations Center, and a Fire Alarm Center. TCA was involved in the prototype program for all facilities as well as the design of 7 of the resulting 34 facilities.

CITY OF GRAND JUNCTION FIRE STATION 1 REMODEL

After evaluating the costs for the construction of all new facilities, it was determined that the design of a new public safety building and the renovation/repurposing of the existing police station and main fire station would provide a better value for the community under strained economic conditions. The 12,000 SF main fire station, originally constructed in 1962, was too small to accommodate both the administrative and operational needs of the fire department. By phasing a newly envisioned three building campus: rebuilding a new public safety building and emergency operations center, moving fire administrative functions into an adjacent remodeled police station and the remodeling the existing fire station, the design team was able to transform the existing fire station into a functional modern day facility. Through the design process, the remodeled station was expanded, strengthened, reorganized internally and received full system upgrades. With a two-story addition to the bays, apparatus support areas were added in an appropriate location and additional bay space was incorporated. While the majority of the work was internal, the facility also received a face-lift and now visually fits in with the historical character of the downtown context.

Address	330 S 6th Street, Grand Junction, CO 81501
Completed	Summer 2012

KING COUNTY FIRE DISTRICT 37 FIRE STATION 78

Covington is a rapidly growing suburban area with a commitment to establishing new public facilities that reflect the character of their neighborhood. The design of Station 78 balances fire station requirements, civic presence and neighborhood scale by incorporating forms that minimize its bulk and using low maintenance materials in interesting combination. Public use areas are oriented prominently to the street, and crew areas to the quiet back side of the site with training functions to the rear apron away from public view. The floor plan reflects a review of lessons learned from existing department fire stations with an emphasis on optimizing response times and incorporating training opportunities. All aspects of the plan enhance crew response and fast opening bi-fold doors expedite vehicle exit from the station. Innovative use of an attic space with access to the hose tower, the upper level of the Bay and to an exterior balcony provides meaningful training scenarios. Primary Features of Training Space include: Tower, Rappelling, Confined Space opening to exterior or interior, Standpipes, Laddering, High Angle Rescue, and Maze Training Scenarios. The site includes a public parking layout that will also serve future development of an adjacent public facility site. The final result addresses public use, station crew and department needs efficiently and effectively in a design that reflects the pride of the developing community.

Wyoming Department of Transportation—Evanston Shop Facility

This facility houses the Highway Patrol, Drivers Services, and Engineering Department offices for the District. It also includes vehicle storage and shop storage for Highway Patrol and the Engineering Department and a soils and concrete testing lab. In addition, there is a wing for the Maintenance Crew which includes the Striper and Snow Plow Crews.

The building is being constructed on the main highway in a commercial and low residential area of town and oriented on the site so the public areas face the highway and the shop wings angle off to the back of the site. Along with strategically placed landscaping, this orientation has helped shield the sand piles and the equipment yard from public view. Also situated on site is a retention pond and salt/sand storage building which includes an integral brine plant and a fuel island.

The shop areas include a welding area with an overhead traveling crane, a wash bay, an oil change area, and vehicle storage. The Striper and Snow Plow Crew areas include offices, locker rooms, material storage areas, oversized vehicle storage areas and an integral wash bay.

Contact: Damon Newsome, Resident Engineer
Wyoming Department of Transportation

Project Dates: Under Construction

Project Bid: \$9.9 million

Current Cost: \$10 million

Cost Variance: Primarily additional asphalt paving and gutters.

Rock Springs / Green River / Sweetwater County Joint Communications Center

The \$1.7M project included the renovation of an existing 5,400 square foot retired fire station. The entire space was gutted of existing finishes and utilities. New HVAC and electrical systems were installed allowing for the new use. The center includes new state of the art communications for emergency dispatch as well as new security measures providing a secure dispatch environment. The facility will use modern access controls and CCTV, ballistic resistant materials, and site elements prohibiting vehicular intrusion. The primary goal of the renovation was to design and provide a single, safe, and secure facility providing all emergency dispatch communications serving Sweetwater County as provided by the Cities of Green River and Rock Springs as well as the Sweetwater County Sheriffs Department.

Contact: Mike Lowell, Sheriff

307.922.5300

Project Dates: 2010 - 2011

Project Bid: \$1.7 million

Final Cost: \$1.67 million

Cost Variance: Liquidated damages and changes in scope

Western Wyoming Community College Lab Renovation

The \$778,000.00 project included the renovation of 5,135 square feet of existing Archeological Space within Area "G" of the Campus. The existing space was completely gutted including mechanical and electrical utilities. The new Laboratory was constructed with new code compliant HVAC throughout as well as a new electrical and data services. New lighting was provided in surrounding spaces as well to better serve new gathering areas which were also constructed. Each lab station and table contained at source fume extraction, sinks and eye wash stations, data and power connections, as well as storage. Ancillary spaces such as teacher work areas, storage, and supporting lab space where also constructed. The labs utilize modern technology as well as traditional teaching means with several ceiling mounted projectors, drop down screens, and dry erase boards allowing for maximum flexibility in instruction.

Contact: Karla Leach, President

Project Dates: 2010 - 2011

Project Bid: \$737,000

Final Cost: \$778,000

Cost Variance: Owner requested changes

Plan One / Architects is not aware of any potential conflicts of interest for our firm or ,our consultants, which would adversely affect the City of Cheyenne and our ability to fulfill our obligations on this project in a manner commensurate with expectations.

Design Philosophy

Both Plan One and TCA believe in a very open design philosophy. While we are hired as design experts and bring extensive knowledge to the table, we firmly believe that it is the stakeholders designated by the City and Fire Department who bring some of the most valuable information to the process. They are the ones who know what they would like to see in their facility, it is our job to bring as much of their vision to the project as possible based on forward thinking design principles, efficient layout, and an eye on budget.

We will kick-off your project with a planning and scheduling workshop. This workshop will include representatives of the City and Fire Department to review all of the issues, objectives, and requirements of your projects. As a result of having a well established team experienced in fire facility design, we understand the timing and sequencing of design related issues and have the foresight to know when the appropriate questions must be asked of both the client and one another to maintain efficiencies.

Through our unique programming methodology, we will then review how your stations will be used and what your facilities will need to support, now and in the future. During this process decisions will be evaluated based on operational efficiencies, durability, cost of maintenance and ownership, and energy reduction. All decisions will be defensible and well-documented. Key to this effort will be understanding your identified space needs to determine what changes and improvements can be made to further refine your efforts. Our goal will be to plan for flexible and efficient facilities designed to save you money in the years ahead. As the operations- based program is verified, these program decisions will be used as a basis to evaluate prototype fire station design concepts. It is important to establish design criteria early on to assure budget and program alignment. Understanding what works and does not work in your current stations, and others you have toured, will be key to this process.

Site arrangement diagrams will demonstrate vehicular flow including response, delivery vehicles, public/ employee parking, secure zones, general building arrangement and orientation. Each evaluation will also determine the ideal building orientation for maximum energy efficiency design and develop a high performance checklist for possible elements to consider for long-term savings.

Concurrent with the development of your operational program, we will begin to evaluate site options in preparation for a "test to fit" process. This process is important in assuring that your site(s) is understood from a land use, contextual and environmental perspective before conceptual design commences.

Following the programming and site analysis process we will develop conceptual concepts for the fire station based on specific circumstances of the site.

We understand that the funding of this project will come from a tax initiative and stand ready to assist the City in promoting the project to the best of our ability. We can provide 3D computer models of the facilities, inside and out, so the public can visualize what they will be paying for. Also, we can be available to attend public meetings if necessary to explain the design philosophy that went into determining the layout of the facility.

When the Phase I process is funded, detailed design drawings, construction documents, and specifications for construction will be developed; this is an extensive refinement process involving the client, users, and design team. The final contract document phase will include all documentation necessary for receiving contractor bid proposals and building permits. During these phases, professional cost estimates will be prepared and approved to assure the project remains on budget when it is bid.

While the design process will be a team effort between Plan One and TCA, Plan One/Architects will shift into a more primary role for the Bidding and Construction portions of the project, allowing us to assume the role as the Owner's Advocate on the project. With continued input from TCA, Plan One will handle the bidding process, including hosting the pre-bid meeting, fielding contractor questions, issuing addenda, opening bids, and getting contracts executed by all parties.

Once the project moves into construction, Plan One will continue to act on the Owner's behalf and attend regularly scheduled Owner/Architect/Contractor meetings and conduct periodic on-site construction observations to ensure the project is being built according to the contract documents. Additionally, our team will respond to requests for information, review shop drawings, maintain meeting notes, process supplemental instructions, and review applications for payment, and, as the project nears completion, we will work with you to assure the project is closed out appropriately in accordance with the contract documents. Our entire goal of the construction process is to ensure the City gets the project that was designed.

CHARLES E. VAN OVER, AIA

President

Professional Experience

Charlie is the President of Plan One/Architects and brings 40 years of architectural design experience to Plan One/Architects' design team and has been involved in many of the firm's more challenging projects. Charlie is dedicated to providing clients with outstanding projects through creative design, careful programming, meticulous construction documents, and thorough construction contract administration.

As Managing Architect of the Rock Springs office, Charlie typically oversees production of documents and construction contract administration for projects throughout the southern areas of the state of Wyoming.

While Charlie is well versed in numerous project types, his particular areas of expertise include financial institutions, educational facilities, correctional institutions, medical facilities, office/retail spaces, and warehouses.

Selected Project Experience

Transportation Facilities:

- ◆ Wyoming Department of Transportation -
Evanston Shop Complex, Evanston, Wyoming
Thermopolis Shop Complex, Thermopolis, Wyoming
Jackson Shop Complex, Jackson, Wyoming

Sweetwater County

- ◆ Health and Human Services Building, Rock Springs, Wyoming
- ◆ Centralized Purchasing Office

Memorial Hospital of Sweetwater County

- ◆ Medical Office Building, Rock Springs, Wyoming
- ◆ Ambulatory Surgery Center, Rock Springs, Wyoming

Educational Facilities:

- ◆ Farson Eden K-12, Farson, Wyoming
- ◆ Black Butte Alternative High School, Rock Springs, Wyoming
- ◆ Eastside Elementary School, Rock Springs, Wyoming
- ◆ Big Piney Elementary School, Big Piney, Wyoming
- ◆ LaBarge Elementary School, LaBarge, Wyoming
- ◆ Multiple Major Maintenance contracts with Sweetwater County School District No. 1

Ken Burnett, AIA**Professional Experience**

Ken has worked in the construction industry since 1976, both in Colorado and Wyoming. He was the co-owner of The Building Department Inc., in Denver, Colorado and owned and was President of Code Consulting and Inspections from 1980 until moving to Wyoming in 1993. Mr. Burnett worked for the Wyoming State Fire Marshals Office as a plan reviewer and large commercial building inspector, he was a Construction engineer for Wyoming A & I, General Services Division. Mr. Burnett has been involved in all types of projects from prisons, to large commercial buildings, to schools, multi family projects and building investigations over his 40 years of Architectural experience.

Selected Project Experience

- ◆ 5401 Yellowstone (Day Care)
- ◆ ATEC Building (EWC)
- ◆ Freedom Elementary School (Laramie County School District #1)
- ◆ Borin Office Building

**EDUCATION**

Bachelor of Architecture
Lehigh University
Bethlehem, PA

YEARS OF EXPERIENCE

9 Years

Britt Swanson, AIA**Professional Experience**

Miss Swanson has been with Plan One/Architects since April of 2011. Not only does Britt have experience in designing community projects, but she also has previous fire station design experience. In her current position with Plan One/Architects, she has coordinated and overseen some of our more major medical projects. On a daily basis, some of her activities include overseeing production of construction documents and coordinating engineer and consultant information into plans and specifications during the design process. She also conducts construction observations and coordinates closeout activities including punch list reviews and collection of closeout documentation.

Selected Project Experience*Sweetwater County*

- ◆ Health and Human Services Building, Rock Springs, Wyoming

Memorial Hospital of Sweetwater County

- ◆ Medical Office Building, Rock Springs, Wyoming

Sweetwater County School District Number One

- ◆ Black Butte Alternative High School, Rock Springs, Wyoming

**Oak Creek Fire Protection District*

- ◆ Stagecoach Fire Station #1
- ◆ Grant Proposal for funding a new station in Oak Creek, including complete design.

**While employed with Mountain Architecture Design Group*

BRIAN HARRIS

AIA, LEED AP BD+C, NCARB, PRINCIPAL

Working as a Fire Facility Design Specialist, Brian will bring a comprehensive knowledge of planning & design to your project. He has developed a unique insight into the design of municipal projects through the planning of over 150 municipal facilities. Recently, Brian authored articles for the International Fire Chief Association Foundation on Station Planning and Fire Chief Magazine on high performance facility design, and has received multiple fire station design awards. In addition, he has also participated in a National Symposium on Design, Construction, and Maintenance; Building Design and Construction Symposiums; and has lectured on Fire Station and Multi-Use Facility Design, Emerging Trends in Fire Service Design, and Security for Public Facilities. In 2012, Brian completed the 1st Fire Station in the country which meets the 2030 challenge and is certified LEED Platinum and has since been involved with two additional projects with similar efficiency targets.

Mr. Shaffer is a Wyoming resident, University of Wyoming graduate, and has more than 18 years of experience. He is a registered professional engineer in the State of Wyoming and has completed the structural design of hundreds of projects across Wyoming including primary and secondary educational facilities, public administration/office structures, hospital/medical centers, as well as a variety of city, state and federal government projects. John is familiar with the unique soil conditions and atypical foundation systems, and has extensive experience in the structural design of new facilities as well as modifications/additions to existing facilities. John's experience includes significant structural designs utilizing concrete, precast concrete, steel, masonry and wood. In addition, he has experience in managing the construction administration phase of projects while developing relationships with the design and construction team. As principal engineer and firm president, John is directly involved with every project. Representative project experience includes:

- Laramie Fire Station No. 3 (West Laramie Fire Station), Laramie, Wyoming
- Sweetwater County Fire District #1 Fire Station & Training Facility, Rock Springs, Wyoming
- Cheyenne Public Safety Building, Cheyenne, Wyoming
- Cheyenne Police Department Dinneen Building Structural Evaluation, Cheyenne, Wyoming
- FE Warren Air Force Base, Cheyenne, Wyoming
 - Army Aviation Support Facility (Construction Administration Representative)
 - Blue Spruce Neighborhood Garages Replacement
 - Building 284 Historic Renovation
 - Building 1151 Upgrades
 - Building 1250 Remodel
- Wyoming Air National Guard, Cheyenne, Wyoming
 - Building 16
 - Building 31
 - CST Readiness Center Planning and Engineering Studies
- Laramie County Juvenile Detention Center, Laramie County, Wyoming
- Laramie Recreation Center Addition, Laramie, Wyoming
- Ivinson Memorial Hospital Expansion, Laramie, Wyoming
- University of Wyoming, Laramie, Wyoming – 25 projects including:
 - Arena-Auditorium Remodel
 - Buchanan Center for the Performing Arts
 - College of Business
 - Energy Innovation (Resource) Center
 - Engineering Complex
 - Golf Practice Facility
 - Half Acre Gymnasium Addition and Renovation
 - High Bay Research Facility
 - Literacy Research Center + Clinic (LRCC)
 - Marian H. Rochelle Gateway Center
 - Michael B. Enzi Science, Technology, Engineering and Mathematics (STEM) Facility
 - Roof Replacement (McWhinnie Hall and the Engineering Building)
 - State Veterinary Lab
 - Visual Arts Facility
 - War Memorial Stadium (various projects)
- Albany County School District, Laramie, Wyoming
 - Laramie High School
 - Linford Elementary School Addition

Registered Professional Engineer, CO #35170

Professional Land Surveyor, CO PLS 35170

Professional Land Surveyor, WY PLS 9283

National Record Engineer (NCEE), #21082

Professional Qualifications

Wyoming State Board of Directors of ACEC

National Society of Professional Engineers

Commercial Pilot - Chief Pilot, Western R&D, Ltd.

Active Member / American Society for Photogrammetry Remote Sensing

American Society of Civil Engineers

Wyoming Engineers Society

Gary is the Principal and President at Western with over 34 years experience in engineering, surveying, and flight operations – flight planning, control networks, field surveying, and field procedures and safety practices. He sits on the Wyoming State Board of Directors of ACEC and is a Professional Engineer that has spent decades becoming intimately acquainted with our regional terrain and personally dedicated himself to raising the bar for expectations in both the Surveying and Engineering professions. Gary is the corporate pilot and flies the LiDAR/Digital Imaging Bell 206 Long Ranger.

A representative sample of relevant project experience includes:

Archer Complex, Laramie County, WY (Project Manager)

Served as the lead project civil engineer and surveyor for the new County Complex. Provided all grading/drainage design, detention facilities/storm water drainage, water and sewer design, and surveying. The surveying consisted of a complete LiDAR and Digital Image of the entire 850-acre project which was then used to create the topographic map used for the civil design.

Wyoming State Parking Garage, Cheyenne, WY (Traffic Engineer)

This traffic study entailed looking at the area to the west of the Capital building and determining what modifications would be needed to existing intersections once the new three storey parking garage was built. The study examined eight intersections surrounding the new facility and made recommendations to the City. All recommendations were implemented.

South High School, Cheyenne, WY (Principal)

Responsible for all site surveying, easements, topographic surveying, grading/drainage design, water and sewer design, road and parking lot design. These services were provided for the five off-site intersections including a roundabout, traffic study, drainage study, stadium and track design, construction stakeout, construction management, and cost estimating.

West Allison Road Corridor Study, Cheyenne, WY (Principal-in-Charge)

This project study was originally intended to look at connecting the South Greeley Highway (Hwy 85) to Parsley Boulevard via West Allison Road. This would entail the purchase of three homes in the subdivision to allow the connection. We were able to expand the scope and look at alternatives which gave the City two other solutions and thus eliminated the need to purchase the homes. In addition, the study required a thirty-five percent design of Allison Road from Highway 85 to Walterscheid Boulevard. The design included analyzing the drainage in the area and mitigating any existing problems.

Louis B. Harmon, PE, PLS, PG - Sr. Project Engineer, QA/QC

Education

B.S. Degree in Geological Engineering, Colorado School of Mines - 1967

Engineering Officer
Advanced Course, United States Army

Registrations

Registered Professional Engineer – Wyoming, Colorado, Kansas, Nebraska

Registered Professional Surveyor – Colorado, Kansas

Professional Geologist - Wyoming

Professional Qualifications

Engineer Officer Advanced Course

Continuing Education: 40 hr Hazardous Waste Operator Safety Course; Courses on GIS, CAD, Cross Connection Control, Landfill Liner Design, Pump Design, Anaerobic Digester Design & Manure Management

Mr. Harmon has over 40 years of experience with municipal utility engineering and planning, including the experience in seeing through long-term planning from concept to reality. Mr. Harmon is the past Program Manager of the Water and Wastewater Program, Wyoming Department of Environmental Quality/Water Quality Division. He brings 45+ years of experience working with water and wastewater designs and planning throughout Wyoming and Eastern Colorado.

A representative sample of experience includes:

Department of Environmental Quality, Water Quality Division, Cheyenne, WY Water and Wastewater Program Manager

Supervised a staff of 15, including 6 engineers and geologists who were first line supervisors. The program is responsible for all water and wastewater construction permitting for the State of Wyoming, water/wastewater operator certification and co-administration of State Revolving Funds for water and wastewater loans.

Department of Environmental Quality, Southeast District Engineer

Supervisor of staff responsible for the review and approval of permits for water, wastewater, and subdivisions. Permits reviewed and approved include the \$32 million Cheyenne Water Treatment Plant and the \$36 million Cheyenne wastewater treatment plant upgrade. Lead for the drafting of Water Quality Division regulations for confined swine feeding and update of public water systems for cross connection control.

Department of Environmental Quality, Southeast District Engineer

Supervisor of staff responsible for the review and approval of permits for water and wastewater. Until 1992 the WQD Districts had responsibility for the Underground Storage Tank Program and the environmental remediation at the refineries. The Southeast District Engineer became very familiar with the Sinclair Refineries in Casper and Sinclair, Frontier Refinery in Cheyenne, and the Wyoming Refining in New Castle.

Feasibility Study of Torrington Wastewater Treatment Plant (WWTP)

Upgrade, City of Torrington, Wyoming - A complete evaluation of reasonable alternatives to upgrade the present Torrington Aerated Lagoon Wastewater Treatment Plant to achieve current and long term compliance with the Wyoming (WYPDES). It included a complete analysis of the present wastewater collection and treatment system was completed. Factors included were land use, population, population projections, water supply and usage, wastewater generation, inflow, and infiltration, and extensive historical and current operational data. A detailed history and projection of future regulatory requirements and impact on future operations and expenses was provided.

Adrienne Nunn, PE - Project Engineer

Education

MS, Civil Engineering,
University of Wyoming,
Laramie, WY – 2009

BS, Civil Engineering,
University of Wyoming,
Laramie, WY – 2006

Registrations

Professional Engineer,
Wyoming

Ms. Nunn brings extensive civil engineering design and permitting experience to Western. At Western, she has lead the civil design for a new Kenworth Development, site modifications at Henderson Elementary, and performed inundation mapping for the State Engineer's Office. As Project Engineer at the State of Wyoming – DEQ, she performed duties in several areas of the Water Division. She reviewed application and wrote permits for Underground Injection Permits and Permits to Construct. The development of these permits requires an in depth understanding of injection facilities, water and wastewater treatment systems, and remediation of soil and groundwater. Her Master's project included an in depth hydrologic model of a 13,000 acre site to predict groundwater recharge. She also had three years of design experience with at WYDOT. Adrienne's expertise and experience on various types of engineering projects will be a valuable asset to the project team.

A representative sample of experience includes:

Kenworth Site Development, Laramie County, WY (Project Engineer)

Project manager for the development of civil plans for a new Kenworth Site just east of Cheyenne. The site included design of a septic system, water tap, pavement, drainage and grading. The grading plan was very intricate as Kenworth has a standard for very low slopes for their parking lots.

State Engineer's Office 2015 Inundation Mapping (Project Engineer)

Conducted dam breach analysis and flood mapping for two reservoirs in Sheridan County.

Henderson Elementary School, Laramie County, WY (Project Engineer) –

Responsible for civil engineering and surveying for the site modifications at Henderson Elementary School. The site modifications included re-grading and paving an asphalt/gravel mix parking lot with concrete, design of a large block Redi-Rock gravity retaining wall, and onsite detention. LiDAR and digital images for the project were created for the site design. Additionally, Western provided additional surveying for design and construction. The construction from the design has been completed and the School District is pleased with the site improvements.

High Plains Aquifer, Laramie County, WY (Project Engineer)

Conducted a groundwater recharge study for the State of Wyoming – Department of Environmental Quality during an internship while completing graduate studies at the University of Wyoming. Study included collection of water levels, developing a hydrologic model, in GIS/Arc Hydro, and a comprehensive report summarizing the study.

PROJECT ROLE

Sr. Cost Estimator

EDUCATION

B.S. Degree, General Building Construction, Arizona State University, 1983

OTHER TRAINING

MBA Program/graduate level business studies, 1983

Value Engineering Module I, 1991; Module II, 1993

JAY PRECHEL

SR. ARCHITECTURAL/STRUCTURAL COST ESTIMATOR

SUMMARY of EXPERIENCE

With a BS Degree in General Building Construction, College of Engineering and Applied Sciences from Arizona State University, Mr. Prechel brings to this project over 25 years of experience in the field of architectural and structural cost estimating. While A/S estimating is his forte, he also performs estimating in HVAC, Plumbing Electrical and Special Systems. This experience has included conceptual estimates, hard-bid estimating, value engineering, scheduling, post-mortem analysis, bid evaluation, expert witness testimony, constructability reviews, change order cost evaluations, punch list evaluations and monthly project completion inspections. In addition, he performs quantity surveys and pricing for all trades (including) on schematic design documents, design development documents and construction documents, as well as the impact of addenda to the estimate costs.

REPRESENTATIVE PROJECTS

Bieber Forest Fire Station/Helitack site (1 phase only):

Apparatus building (3 bay), 1,999 s.f.
Generator/pump/storage shed, 798 s.f.
Barracks/mess hall (36 bed), 11,933 s.f.
Helicopter hangar, 6,750 s.f.
Garage building (4 bay), 1,984 s.f.
Dozer shed, 1,982 s.f.

Fawn Lodge Forest Fire Station (1 phase only):

Apparatus building (3 bay) 1,999 s.f.
Generator/pump/storage shed, 3,753 s.f.
Barracks/mess hall (12 bed), 3,753 s.f.

Red Bluff/Tehama Glen Forest Fire Station (3 phases):

Phase I: Generator/pump/storage building, 798 s.f.
Dozer shed, 1,982 s.f.
Auto shop (5 bay), 10,942 s.f.
Phase II: Apparatus building (existing) retrofit, 5,926 s.f.
Barracks/mess hall (18 bed), 4,437 s.f.
Maintenance/support building, 2,496 s.f.
Warehouse, 10,000 s.f.
Phase III: Fitness building, 1,125 s.f.
Administration building, 10,052 s.f.

Ishi Conservation Camp, Paynes Creek, CA

Provided conceptual cost estimating services in three phases for this Budget Package project. The project consisted of a generator, pump and storage building, 744 sf, garage building (4 bay), 5,952 sf; inmate recreation building, 2,874 sf; inmate barracks, 10,863 sf; mess hall, 4,978 sf; inmate hobby building, 2,480 sf; dozer shed, 1,982 sf; CDF officers quarters (12 bed), 3,753 sf; CDCD administration building, 3,846 sf; woodshop & maintenance building, 1,260 sf; wash rack & filter room, 1,620 sf; CDF administration building, 3,000 sf.

Growlersburg Conservation Camp, Georgetown, CA

Provided cost estimating services in three phases for the following budget packages project: CDF officer's quarters (24 bed), 6,196 sf; inmate barracks, 13,536 sf; mess hall, 6,369 sf; staging restroom, 958 sf; generator/pump/storage building, 978 sf; auto shop (5 bay), 7,684 sf; family visiting, 1,026 sf; pole barn, 3,000 sf; saw mill shed, 1,500 sf; planer/assembly building, 1,600 sf; saw mill, 3,960 sf; warehouse, 7,013 sf; cabinet shop, 7,000 sf; administration building, 3,930 sf; garage building (4 bay), 1,984 sf; inmate recreation building, 4,000 sf; inmate hobby building, 2,480 sf; multipurpose building, 816 sf; site work.

REQUEST FOR PROPOSAL NO.: RFP - 6 -16
PROJECT NAME: "EMERGENCY RESPONSE FACILITY PROJECT"

ATTACHMENT "B-2"

ACKNOWLEDGMENT OF RECEIPT
OF RFP PACKET, SAMPLE AGREEMENT AND ADDENDA

The undersigned hereby acknowledges receipt of the City of Cheyenne Request for Proposals (RFP) packet for Emergency Response Facility Project including: Sample Professional Services Agreement, Scope of Work, Compensation Schedule, Project Schedule, and the following addenda issued during the procurement process.

Addendum #1:	Email with Sign In Sheet	dated	October 22, 2015
Addendum #2:		dated	
Addendum #3:		dated	

Failure to acknowledge receipt of the proposal packet, sample Agreement, and all addenda may cause the proposal to be considered non-responsive to this solicitation.

Name of Proposer: Plan One/Architects

Signature of Proposer:  President

Date: November 4, 2015

By signing the proposal above, I also declare that the person(s), companies or parties interested in the contract as principals are named therein; that it is, in all respects, fair and in good faith without collusion or fraud, and that the signer of the proposal has the authority to bind the principal proposer.
